Haue raignd and dyed, one after one,  
Long liue King Charles, else we are vndone.

A description of the foure Quarters of  
the yeere, and first of Winter.

☉ in ♍, ♍, ♋.

**A**ccording to the custome of Writers in  
his trade, Winter Quarter is the first  
Quarter, which take beginning the 12. of De-  
cember, 1629. at what time the Sunne entered  
into the first degree of the cold and dry signe Ca-  
pricorne, being then most remote from vs his  
farthest South declination, causing the dayes  
with vs to be shortest, and the nights longest:  
which Quarter continueth untill the Sunne  
hath slowly passed through ♍, ♍, ♋. The  
Quarter doth naturallv resemble old age. The  
diseases incident to this Quarter, are Coughes,  
Catarrhs Rheumes, Obstructions of the Lungs,  
and such like, proceeding of cold and moist cau-  
ses, &c.

Of the Spring.

☉ in ♈, ♈, ♊.

**T**his Quarter doth take his beginning the  
eleventh day of March, at what time the  
Sun entreteth into the first minute of ♈, & doth  
continue whilst the Sunne is passing through  
these three Vernal Signes, ♈, ♈, and ♊. This  
Quarter doth resemble growing Youth. The  
diseases incident to this Quarter, are like to be  
hot feauers, small Pox, Measels Scabs, and  
Plurisies.

## Of Summer.

☉ in ♋, ♌, ♍.

**T**he Summer Quarter doth take his beginning, when the Sunne doth enter into the first degree of Cancer, which will be this yeere the 12. of Iune, about 7. a clocke and 11. minutes in the morning, and doth continue whilest the Sunne passeth through ♋, ♌, ♍. Now are the dayes longest, and the Ayre hottest, therefore, but for necessity, bid Physicke adieu.

## Of Autumne.

☉ in ♎, ♏, ♐.

**A**utumne, for Harvest Quarter (commonly called the fall of the Lease, of some, the latter Spring) doth beginne when the Sunne doth enter into the first degree of Libra, making againe the day and night of equall length: which will be this yeere the 13. of September, about 7. in the morning, and doth continue whilest the Sunne doth passe through ♎, ♏, ♐.

## The vse of the aforesaid Table.

**F**irst hauing a walking-staffe deuided in 12. equall parts, (bee the staffe of what length it will, being equally deuided) wherewith walking, if you desire the houre of the day, if Sun the shine, set your staffe vpright, and see how many of those parts there are in the length of the shadow; then looke in the Table, knowing what moneth and day of the moneth it is, which day, if you finde not in the Table, then take the day that is neereft vnto the day you seeke for, either before the day, or after the day, and looke in the head of the Table, and you shall finde the houre, either before noone, or after noone, as the Table sheweth, for the Sunne hath like altitude at like distance from the Meridian line, in the fore noone ascending, and in the afternoone descending.

### *Example.*

Walking abroad the 22. of Nouember, when the Sun is in 10. degrees of Sagitary, I would know what time of the day it is; I set my staffe vpright, and I find the shaddow to containe 52. of those parts, that is the length of my staffe 4. times and 9. parts of the 12. whereby I perceiue, that it is either 10. in the forenoone, or else two in the afternoone; and so of the rest, as the Table sheweth.
